NXT Foundation and the OSI affiliate program.

NXT is an open source peer-to-peer crypto-currency project, with a de-centralised organisational structure. It can be seen as a competitor to the currently more well known Bitcoin, see: http://coinmarketcap.com/all/views/all/
or:
https://www.coingecko.com/en
for overviews of all current crypto-currency projects, including NXT.

As NXT is, in principle, a decentralised project, there is no set leadership structure, but the NXT Foundation is used as a central organisational point for many aspects of the NXT project, for example as a means of distributing payments to developers, and maintaining community assets such as the discussion fora and some NXT-related websites.
www.nxtfoundation.org

The NXT Foundation is incorporated as a non-profit organisation in the Netherlands,  Stichting NXT. A copy of the incorporation act for Stichting NXT is included as an attachment with this letter.
The stated aim of the Foundation to support development and promotion of the NXT crypto currency system.

Currently, the main NXT client software (NRS, or Nxt Reference Software) is distributed under an MIT license, though we are actively considering moving to a GPL license. Here is the BitBucket repository for the NRS software:
https://bitbucket.org/JeanLucPicard/nxt/src
and an incomplete list of contributors to the NXT code:
https://nxtforum.org/general-discussion/list-of-github-btbucket-contributers-for-nxt/
NXT is committed to the open source model, even to the extent that we have actively assisted competing projects that have been developed using the NXT source code, so-called ‘clone’ currencies.

Although it is difficult to measure adoption precisely, there are 4500 members of the main NXT discussion forum, with a maximum of 500 members simultaneously on-line:
https://nxtforum.org/
The total number of NXT accounts that have been created stands now at approximately 110,000 individual accounts:
http://www.mynxt.info/charts/number_of_accounts.php

Many members of the NXT community would like to contribute to the open-source movement, and the NXT Foundation is committed to upholding the principles of a free, open and de-centralised Web. Becoming an OSI affiliate would be an important step in forging closer bonds between NXT (and the crypto-currency movement) and the wider open-source community.
